+91 9319148946 | garvnanda326@gmail.com | New Delhi, India | [LinkedIn](#) | [GitHub](#)

Machine Learning · Model Interpretability & Auditing · RAG · PyTorch

PROFILE

Computer Science undergraduate specializing in machine learning, with a focus on model interpretability, safety, and auditability. Has built and shipped 7+ AI/ML and Web3 projects end-to-end, from model training through production deployment.

EDUCATION

Maharaja Agrasen Institute of Technology (GGSIPU), New Delhi

B.Tech in Computer Science & Engineering | CGPA: 9.42 | 2024–2028

EXPERIENCE

SSPL, DRDO: AI & ML Intern Jun 2026 - Jul 2026 | [View Certificate](#)

- Benchmarked five denoising filters (15 configurations) and five enhancement techniques (21 configurations) across 100 FLIR ADAS thermal images - establishing Tenengrad (not the standard Variance-of-Laplacian, found unreliable on thermal data) as the project's edge-quality metric - then selected the optimal two-stage classical pipeline (NLM → Unsharp Masking) feeding the team's CNN enhancement model, discovering a non-obvious ordering effect that improved SSIM by 7.4% and Tenengrad by 12.4% over the reverse sequence (final SSIM 0.959, Tenengrad 5011 vs. 3880 baseline).

Enterminal Market Pvt Ltd: Technical Analyst Oct 2024 - Mar 2026

- Configured and tested internal tools, ran adoption training sessions, and served as primary technical point of contact for troubleshooting, account access, and system monitoring.

PROJECTS

PromotionGuard | [GitHub](#)

Built an AI agent-governance system for a hackathon's agent-security track: an autonomous agent runs a full ML model-promotion pipeline unattended, with every action checked against a cryptographically signed execution plan rather than a keyword filter. Unauthorized calls are hard-blocked or routed to human approval, with a full audit trail. Deployed as a live interactive demo.

SANN (Self-Auditing Neural Networks) | [GitHub](#)

A training-loop auditor that detects data leakage, memorization, shortcut learning, and poisoning attacks in real time during model training. Benchmarked against academic datasets (Waterbirds, BadNets-CIFAR, ciFAIR) alongside synthetic injection tests, with a full feature-ablation study showing activation statistics as the strongest detection signal. Outperformed vanilla-training, fixed-heuristic, and post-hoc-offline baselines on real-time mitigation. In progress.

KSP Crime Intelligence | [GitHub](#)

Built for the Zoho Catalyst Datathon 2026, in partnership with Karnataka State Police: a natural-language interface over a crime database that answers plain-language investigator questions with the underlying query and a confidence score attached. Trained a RandomForest offender-risk classifier with SHAP-based explanations and counterfactual generation, deployed fully on Zoho Catalyst.

GallaSaathi | [GitHub](#)

A voice-first AI copilot for Indian kirana shopkeepers, built for the Gemma Hackathon (Kaggle, Track “Vaani”). Handles code-switched Hindi/Punjabi/English voice commands for udhaar (credit), ledger, and inventory tracking, using Gemma fine-tuned via LoRA for multi-intent extraction into structured function calls, with a trust layer that halts for disambiguation when confidence is low.

CREATOR_X (SocialFi Creator Token & Fan Pass Marketplace) | [GitHub](#)

A Web3/AI marketplace where each content creator has a tradeable ERC-1155 “Fan Pass” token, priced by an on-chain bonding curve continuously modulated by an off-chain NLP sentiment engine analyzing creator engagement. Includes scheduled trading windows, per-creator circuit breakers, and a Flutter app with live on-chain candlestick charts.

ACHIEVEMENTS

Winner, 1st Runner-Up: VisionX Hackathon, GeeksforGeeks Mar 2026

DevLens - an AI onboarding navigator for unfamiliar codebases. Built the complete frontend and assisted with the RAG-based issue-to-code mapping setup (AWS Titan v2 + ChromaDB); backend built by teammate. Mines GitHub PR history to explain why code exists, and includes a multilingual jargon-simplifier for Hindi, Tamil, and Hinglish. | [GitHub](#)

Winner, SmoothSend Sponsorship Track: Ctrl+Alt+Vibe, MSIT Nov 2025

BundleFlow - a Web3 reimagining of Splitwise for gasless micro-payments, built on Aptos. Built the user-facing side: React/TypeScript app with Petra wallet integration, QR-code group joining, and gasless batch settlement via the SmoothSend SDK. Organization-side tooling built by teammate. | [GitHub](#)

CERTIFICATIONS

- Machine Learning Specialization: Stanford Online & DeepLearning.AI, Coursera | Aug 2026 | [Verify](#)
- Machine Learning Basics: Kaggle “Intro to Machine Learning” ([view](#)) & Techgyan “Machine Learning” ([view](#)) | Aug 2026 / Feb–Mar 2025
- AI Ethics: Kaggle “Intro to AI Ethics” | Aug 2026 | [view](#)
- Django: Techgyan Technologies | Feb–Mar 2025 | [view](#)

SKILLS

Languages: Python, C, C++, Java

AI / ML: PyTorch, scikit-learn, RAG, Vector Databases (ChromaDB), LLM Fine-Tuning, Multi-Agent Systems, Reinforcement Learning, Prompt Engineering, NLP, AI Agent Governance & Safety

Backend & Cloud: FastAPI, Streamlit, Supabase/PostgreSQL, AWS, Zoho Catalyst, Docker, REST APIs, MCP (Model Context Protocol)

Blockchain / Web3: Solidity, Foundry, Aptos, Wallet Integration (Petra, WalletConnect, MetaMask)

Frontend & Tools: React, Flutter, Tailwind CSS, Git, GitHub, OpenRouter, Google Gemini API, Kaggle, Google Colab
